

Improve corporate efficiency by consolidating your fax infrastructure

To optimize business processes and reduce operating costs, multinational companies are always looking for ways to consolidate IT systems. Faxination, a single virtualized solution for all fax communications is easy and efficient to manage and control. A centralized message archive ensures regulatory compliancy and provides insight into communication volumes and flows.

Save IT & system management costs

Significantly reduce IT, communication, management and operational costs by deploying Faxination centrally, and combine multiple servers into a more effective single virtualized fax infrastructure. By consolidating all international fax traffic and connecting to business applications, email, and multifunction print, scan and copy devices (MFP), redundant fax hardware is eliminated.

A centralized, consolidated system significantly reduces IT management overhead and makes the system easy to control, accommodate future scale up, and maintain while maintaining local presence.

Full regulatory compliance

Gain valuable insights into all in- and outbound fax traffic for all the offices, applications and devices. Precise time stamping the receipt of delivery, centralized logging and reporting tools help to monitor when who or what sent/received a fax message. This information is useful for compliancy and internal security audits. Digitizing information makes it also easier to preserve, access, and share

Benefit from a virtual infrastructure

Faxination offers multiple Fax-over-IP (FoIP) solutions to leverage existing Voice-over-IP (VoIP) infrastructures to include fax. Instead of maintaining separate fax lines, Faxination Fax-over-IP options allow for the utilization of the same equipment – including remote gateways – such as a Voice-over-IP system. Fax messages can also be routed over specific numbers, prioritized, and scheduled outside of business (peak) hours.

You should consider Fax-over-IP if you want to:

- Save up to 80% of existing costs
- Improve operational efficiency
- Eliminate workflow interruptions
- Improve business productivity
- Fulfill regulatory compliance

Email

Native Microsoft Exchange integration requires no client software or other dependencies, simplifying the deployment and reducing operational costs. Faxination also supports cloud email systems like Microsoft Office 365 E-mail, Gmail, or any other email environment that uses standard SMTP.

Integrate with SAP

Faxination's certified integration with SAP seamlessly integrates fax into all versions of SAP. With Faxination, SAP users are enabled to send and receive fax messages directly from SAP. Moreover, faxes are incorporated into SAP processes and workflows which is a huge efficiency gain. Leverage existing print, copy and scan devices (MFP) Faxination enables faxes to be sent and received directly via existing multifunction print, copy and scan devices (MFP) without the added expense of proprietary fax hardware and dedicated telephony. Use Faxination to capture paper files from the MFP and route them to any email or business application.

Store and share faxes in SharePoint

Faxination facilitates the association of fax numbers with SharePoint document libraries where inbound faxes can be stored for archival purposes or trigger SharePoint workflow rules. When combined with the Faxination OCR module, inbound faxes are delivered to SharePoint in PDF/A format with full text which can be automatically indexed and easily searched.

Application Integration

Faxination offers the flexibility to enhance any (custom) application with fax capabilities. The REST programming interface for developers makes it possible to integrate Faxination with any custom application. Also available is a .NET web services programming interface for any web services-enabled business application or customized web services application.

About Fenestrae®

For more than 25 years, Fenestrae solutions improve business agility and reduce operational costs of organizations all over the world. We help our customers to transform into a digital business with our solutions for the secure processing and exchange of valuable business documents.
