

## Faxination Server leads the way to secure, quick and accessible faxing

Secure sending and receiving of faxes

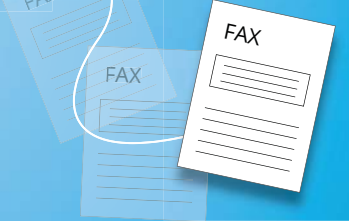

Cost saving up to

75%

Optimal ease of use

Within the healthcare industry, fax is still one of the most used means of communication for sending and receiving medical data. The time and money lost by manually faxing documents is hard to quantify and human error (manually dialing the wrong fax number) can compromise patient confidentiality. Faxination Server guarantees secure transmitting of documents, quick access to actual data, and a considerable saving on cost by giving customers full control of their fax communications.

### Cost saving

An average hospital sends around 300.000 manual faxes per year, which adds up to an annual expense of 1.2 million euro on staff costs alone. Faxination Server reduces these costs substantially by connecting directly to the application, allowing users to send and receive faxes directly from their workspace. The centralization of fax traffic, and the more efficient use of telephony, allows for large savings on maintenance and management costs – savings as much as 75%.

Direct savings are also achieved through the decrease in use of paper, ink/toner, other device consumables, equipment wear and tear, and the cost of electricity.

### Guarantee of privacy

Governments obligate healthcare providers to maintain medical files, guarantee their security, and offer patients the opportunity access their medical records in a timely fashion. Faxination Server guarantees the privacy of the medical records and the security of personal information by offering full control over who is allowed to send or receive faxes. By having full control over the inbound routing and storage of fax documents, unauthorized personnel have no access to confidential patient information. By digitalizing all fax communications, physical paper faxes will no longer be 'laying around' unattended.

The reporting options of Faxination Server allows for better insight in the quantity of inbound and outbound faxes. By evaluating this information, fax traffic can be optimized and more money saved.

“ SMART EXCHANGE OF  
INFORMATION IS  
ESSENTIAL ”

## Improving quality of healthcare

Faxination can integrate seamlessly with existing medical information systems and patient record databases, ensuring that the most up-to-date information is available at any time. This improves efficiency, provides regulatory compliance, and ensures that patients receive the customized care that they need – when they need it.

## Ease of use

As new standards are mandated for the medical industry worldwide, caretakers are dealing with a lot of changes and are working under constant time pressure. Through careful integration with existing systems, Faxination allows the medical staff to work with the same applications that they are accustomed to – with no new software or complex techniques to learn.

## Software information

- Faxination is modular. Various software modules can be connected which link different applications and/or mail environments to the central fax server. This link is available per department, several departments, or for the whole facility.
- Faxination can be fully virtualized to run in VMware or Microsoft Hyper-V environments. Faxination Server 2013 R2 is certified for Microsoft Windows Server 2012 R2 and Hyper-V.
- Faxination can utilize existing analog/ISDN telephony, modern fax-over-IP via an existing voice-over-IP infrastructure, or a SIP trunk directly from a local provider.
- Faxination can be integrated with any type of multifunctional peripheral (all-in-one scanner/copier/printer). All major brands and models are directly supported, with extensibility for new devices as they are developed.
- Faxination can extend fax services to other departments of your organization through SAP, SharePoint workflows, SMTP email, custom web service applications, and more.
- Faxination can send and receive faxes directly from HL7-compliant systems including applications such as lab systems, hospitalization, transfers, request for resignations, results, orders and reservations.

## About Fenestrae®

For more than 25 years, Fenestrae solutions improve business agility and reduce operational costs of organizations all over the world. We help our customers to transform into a digital business with our solutions for the secure processing and exchange of valuable business documents.
